## What are the benefits of RTS technology?

- RTS transmissions pass through walls. You do not necessarily have to be near your awning or other type of application in which a Somfy motor is incorporated: operating is also from another room or from another floor.
- RTS has a handy and self-adjustable “my” function with which you can easily give a product a fixed, favorite intermediate position. You can change it at any time.
- No additional wires are required for operation. The receiver is in the motor. The only wire required is from the RTS motor to the power supply.
- You can combine controls and controls as desired and expand the system at any time with additional remote controls, wireless wall controls and app control.
- With RTS you can also apply compatible sensors that respond to weather change. For example, a Somfy RTS sun sensor lowers your sun protection during sunlight measurement and the wind sensor collects the sun protection in time if it starts to blow too hard.
- Safe operation with a rolling code reduces interference with other radio products.

### Single channel operation

Operate 1 electric roller blind (or other application) individually or a group of roller blinds simultaneously.

### Multi channel operation

Operate 1 to 5 electric roller blinds (or other applications) individually or as a group. Expandable up to 16 channels with individual control.
